

**Category: Modern Application Development**

*Winner: Malaysian Administrative Management and Planning Unit (MAMPU)*

Inspired by the theme of the Red Hat Forum APAC 2018, 25 September 2018, “Ideas Worth Exploring,” Red Hat Innovation Awards APAC recognize organizations that are modernizing and optimizing their IT infrastructure using open source to be more efficient, flexible and agile. Winners were selected based on the business value and impact delivered by their Red Hat deployments.

MAMPU is a central agency of Malaysia’s Public Service Administration, responsible for the modernization and transformation of the public sector. As part of its role, MAMPU provides the ICT infrastructure and a standardized system for the public service sector and its agencies. In alignment with the country’s digital transformation initiative and to better serve the government agencies and develop the capability of its public services, MAMPU decided to deploy the Red Hat Cloud Suite solution. This resulted in improved accessibility in system development for the benefit of the government and its people. MAMPU also benefited from increased cost savings in infrastructure and licensing requirements.

The Modern Application Development category recognizes the organization’s overall performance in creating, maintaining, and deploying successful business applications through the use of agile methodologies.
